

Filter Readiness Map — the metadata behind every filter

For each target filter: where the data lives, whether it's standardized, what field Shopify can filter on, and the work to turn it on. Shopify Search & Discovery builds facets from product options, metafields, or tags only.

Target filter	Metadata source	Data present?	Shopper-ready?	Filterable via	On site?	Work to enable	Effort
Availability	Shopify native	Yes	Yes	Native facet	LIVE	Already on — keep	—
Price	Shopify native	Yes	Yes	Native facet	LIVE	Already on — keep	—
Brand	Vendor field (638 brands)	Yes — 0 missing	No — supplier codes	Vendor facet	OFF	Normalize vendor names (e.g. LEEGIN LEATHER → Brighton), then enable the Brand filter	Low–Med
Garment type	productType codes	Yes	No — cryptic 3-letter codes	Product-type facet	OFF	Map codes to shopper labels (decode table done), then enable the Product-type filter	Low
Color (text)	Color option	5,353 of 11,693	No — 6 spellings	Option facet	OFF	Unify Color/COLOR/colors spellings; fill type-aware gaps; enable Color filter	Med
Color (swatches)	shopify.color-pattern metafield	1,201 (10%)	No — 10% mapped	Metafield facet	OFF	Map ~3,620 raw values → palette metafield; turn on swatches	Med–High
Size	Size option	Apparel mostly yes	No — Size/SIZE split	Option facet	OFF	Unify naming; add Size to 152 apparel/footwear gaps; enable Size filter	Low–Med
Material / fabric	Description text only	~2,392 mention fabric; 0 structured	No	Metafield (to build)	OFF	Extract fabric words from descriptions → a Material metafield/tag, then enable	High
Occasion / style / fit	None yet	No	No	Tags/metafields (to build)	OFF	Net-new attribute tagging — longest-horizon; what the biggest sites offer	High (future)
